JOINT DEMONSTRATION IOT SOLUTION WITH TECHSHOP

A demonstration of Industrial, Internet of Things (IoT) Solution by PsIoT Group (a division of Solarin Technologies, LLC.)

Austin / Round Rock, Texas, January 27, 2017– PsIoT (Point Solution Internet of Things) is working with TechShop Austin-Round Rock to install two, custom demonstration industrial IoT point solution sensor appliances to monitor TechShop equipment. The first is an IoT safety device, which is an oxygen sensor used in the welding area to detect Argon gas leaks and alert personnel when low oxygen levels are detected. The other IoT solution is an industrial, predictive maintenance monitor, for the laser etcher which detects that the air pump is running properly while the laser is in operation, as air is used to cool the laser lens which overheats without the air flow.

> *"A big part of our mission at TechShop is to provide the facilities and environment that enable entrepreneurs to bring their products to life. It has been a great experience to support Solarin in their testing and implementation of IoT solutions for our real-world challenges as a prototyping and fabrication center"* said **Mark Emanuel, General Manager at TechShop**

Solarin Technologies, LLC.'s PsIoT Group - Providing custom point solution IoT devices, to industry to provide data, which can improve Manufacturing Processes, Safety, Quality, and, provide Predictive Maintenance which reduces down time and saves money.
